EXTRANEAL (Icodextrin, Sodium Chloride, Sodium Lactate, Calcium Chloride, Magnesium Chloride)

**Peritoneal Dialysis Solution:**

A Patient Training Tool
Your doctor has prescribed **EXTRANEAL** (icodextrin) Peritoneal Dialysis Solution as one of your solutions for peritoneal dialysis (PD).

- It’s important to do your dialysis as your doctor has prescribed.

- **EXTRANEAL** is a sterile peritoneal dialysis solution used in patients whose kidneys are not working properly. It removes waste products and water from the blood. EXTRANEAL can be used up to 12 hours for continuous peritoneal dialysis in mobile patients or 14 and up to 16 hours for automated peritoneal dialysis procedures.

- It’s equally important to do your PD exchanges just as you were taught, every time.

- To track your progress, record your weight, blood pressure, and how you feel every day. If there are any changes, be sure to let your PD nurse know right away.

- **If you have insulin-dependent diabetes, pay attention to your insulin dose. See important safety information on page 4.**

- If you’re a continuous ambulatory peritoneal dialysis (CAPD) patient and you notice a black-blue color in the drain line when switching from dextrose solutions to **EXTRANEAL** – don’t worry. The color appears when **EXTRANEAL** mixes with leftover povidone-iodine in the **MiniCap** Disconnect Cap.

- Store **EXTRANEAL** at room temperature (15°-25°C)
  - Until you use it, keep **EXTRANEAL** in its moisture barrier overpouch in its carton.
  - Do not store below 4°C.
• If you are dehydrated, you may feel dizzy or become weak. Report these symptoms to your PD nurse or doctor immediately.

• Talk to your PD nurse or dialysis doctor about adding any medications to EXTRANEAL.

What To Watch For

You may experience certain side effects while using EXTRANEAL. It’s important to be aware of and report any symptoms you may have to your healthcare team. Here are some guidelines:

Rash is the most common side effect of EXTRANEAL. It usually appears during the first 3 weeks of treatment.

Refer to the Consumer Information leaflet with EXTRANEAL for a broader list of side effects. If you experience any side effects while taking EXTRANEAL, contact your dialysis doctor or nurse.

For patients using the HomeChoice Automated PD System and the last fill option, the cycler should be programmed to “dextrose different” and to the volume of EXTRANEAL to be infused. The EXTRANEAL bag should be attached to the line with the blue clamp (last fill line).
Important Safety Information for EXTRANEAL (icodextrin) Patients Who Measure Blood Sugar (Glucose) Levels

Icodextrin or its by-products, such as maltose, may cause some types of glucose monitors and/or test strips to give a false high glucose reading.

- To avoid interference by maltose or other metabolites of EXTRANEAL ONLY use glucose monitors and test strips that are glucose-specific. These methods are common in clinical laboratories. Contact the manufacturer of the glucose monitors and test strips to determine the method that is used.

- DO NOT use glucose monitors or test strips that utilize glucose dehydrogenase pyrroloquinolinequinone (GDH-PQQ) or glucose-dye-oxidoreductase methods. In addition, some but not all monitors or test strips that utilize a glucose dehydrogenase flavin-adenine dinucleotide (GDH-FAD) method should not be used. Use of these methods may result in falsely elevated blood glucose readings in patients using EXTRANEAL (icodextrin) due to maltose interference. Falsely elevated blood glucose readings may mask true hypoglycemia or lead to the erroneous diagnosis of hyperglycemia, leading to life-threatening events.

- A false high glucose reading could cause you or a clinician to give you more insulin than you need.

- A false high glucose reading may mask a very low actual glucose reading and cause you to delay in correcting the low blood sugar.

- Both of these situations can cause loss of consciousness, coma, neurological damage and death.

Please visit www.glucosesafety.com for an updated list of compatible glucose monitors.
What To Do

• You or your PD nurse must confirm that your glucose monitor(s) and test strip(s) will provide an accurate reading when using EXTRANEAL.

• You must notify your PD nurse and dialysis doctor before you change your home glucose monitor(s) or test strip(s).

• It is important to regularly check the test method of your glucose monitor(s) and test strip(s) with EXTRANEAL. Should the manufacturer that makes your glucose monitor or test strips change its methods of glucose measurement, be sure to contact your PD nurse or necessary.

• Be sure to discuss this important information about glucose monitors with your family and friends. In an emergency, they will be able to make sure the nurse or doctor knows of the potential for false high glucose readings.

If you have insulin-dependent diabetes, pay attention to your insulin dose and always monitor your blood sugar levels as directed by your dialysis doctor. Here are a few guidelines to follow:

• See important safety information about glucose monitors and test strips on page 3 for additional cautionary measures.

• Be sure to check your blood sugar levels regularly.

• You may need to alter your insulin dose so please discuss with your PD nurse and dialysis doctor.
What to do if you see health care providers other than those at your PD Clinic:

• Tell the doctors and nurses that you are using EXTRANEAL and that some glucose monitors and test strips may give a false high glucose reading.

• Take the EXTRANEAL admission envelope with you and give it to the doctor or nurse treating you. This envelope has additional information related to glucose monitors for doctors and nurses.

• Even if you stop using EXTRANEAL, this will not resolve the potential for interference with glucose monitors or test strips. Your blood will have increased levels of icodextrin and maltose for up to two weeks after stopping the use of EXTRANEAL.
Included is a necklace that is designed to alert clinicians about the potential for incorrect blood glucose measurements. You should wear it to alert clinicians in an emergency.

A wallet card is included here. Present your wallet card, which explains the risks of how maltose may interfere with some glucose monitors.

To avoid interference by maltose or other metabolites of EXTRANEAR (icodextrin), **ONLY** use glucose monitors and test strips that are glucose-specific. These methods are common in clinical laboratories. Contact the manufacturer of the glucose monitors and test strips to determine the method that is used. **DO NOT** use glucose monitors or test strips that utilize glucose dehydrogenase pyrroloquinolinequinone (GDH-PQQ) or glucose-de-oxidoreductase methods. In addition, some but not all monitors or test strips that utilize a glucose dehydrogenase flavin-adenine dinucleotide (GDH-FAD) method should not be used. Use of these methods may result in falsely elevated blood glucose readings in patients using EXTRANEAR (icodextrin) due to maltose interference. Falsely elevated blood glucose readings may mask true hypoglycemia or lead to the erroneous diagnosis of hyperglycemia, leading to life-threatening events.

For more information on EXTRANEAR and additional glucose monitor information, including a glucose monitor compatibility list, visit [www.glucosesafety.com](http://www.glucosesafety.com).

**WARNING AND PRECAUTION**
**Potential for Incorrect Blood Glucose Reading**

To avoid interference by maltose or other metabolites of EXTRANEAR (icodextrin), **ONLY** use glucose monitors and test strips that are glucose-specific. These methods are common in clinical laboratories. Contact the manufacturer of the glucose monitors and test strips to determine the method that is used. **DO NOT** use glucose monitors or test strips that utilize glucose dehydrogenase pyrroloquinolinequinone (GDH-PQQ) or glucose-de-oxidoreductase methods. In addition, some but not all monitors or test strips that utilize a glucose dehydrogenase flavin-adenine dinucleotide (GDH-FAD) method should not be used. Use of these methods may result in falsely elevated blood glucose readings in patients using EXTRANEAR (icodextrin) due to maltose interference. Falsely elevated blood glucose readings may mask true hypoglycemia or lead to the erroneous diagnosis of hyperglycemia, leading to life-threatening events.

Because you are on EXTRANEAL, you have received an EXTRANEAL admission envelope. The envelope contains an important information sheet regarding blood glucose levels for your health care team.

EXTRANEAL Admission Envelope

Please bring this envelope with you when you go to the hospital. This envelope can help you to avoid false blood glucose readings. It contains useful information for the hospital staff.

EXTRANEAL (icodextrin) Hospital Admission Envelope for:

Please visit www.glucosesafety.com for further related information on EXTRANEAL.

WARNING AND PRECAUTION
Potential for Incorrect Blood Glucose Reading

BAXTER and EXTRANEAL are trademarks of Baxter International Inc.

Please bring this envelope with you when you go to the hospital. This envelope can help you to avoid false blood glucose readings. It contains useful information for the hospital staff.

EXTRANEAL (icodextrin) Hospital Admission Envelope for:

Please visit www.glucosesafety.com for further related information on EXTRANEAL.

WARNING AND PRECAUTION
Potential for Incorrect Blood Glucose Reading

BAXTER and EXTRANEAL are trademarks of Baxter International Inc.

Please bring this envelope with you when you go to the hospital. This envelope can help you to avoid false blood glucose readings. It contains useful information for the hospital staff.
There is also a patient **chart sticker** which your clinician may want to use to remind them about your history and can be attached to your medical chart. Your PD nurse will also show you a sample of the envelope and explain all of the components that are included. Some patients find it convenient to keep this kit with their medical travel supplies.

Whenever you go to the hospital, be sure to bring your **EXTRANEAL** admission envelope along with you.

- It’s important to take the admission envelope with you when you go to the hospital because of this essential information regarding **EXTRANEAL** and measuring blood glucose levels. Simply give it to the nurse or physician who is seeing you.

If you require a replacement envelope, please order one through your **Baxter Customer Care Representative (CCR) Team** at 1-866-968-7477.
For more information, contact your Renal Team.
